

Fed up with heavy menstrual bleeding due to fibroids?

Hysterectomy is **NOT** the only answer.

Now there is an **INCISION-FREE** fibroid treatment option

If you are one of the millions of women with uterine fibroids, you know they can cause heavy menstrual bleeding and long, uncomfortable periods.

Many women are told that hysterectomy (surgically removing the whole uterus) is the only option, **but now there's an INCISION-FREE alternative that is changing women's lives.**

FIBROID facts:

What are UTERINE FIBROIDS?

- Fibroids are benign growths in or around the uterus, ranging in size from a grape to a grapefruit.

What are the SYMPTOMS?

- Fibroids may cause heavy menstrual bleeding and periods that last for weeks instead of days.
- Women may feel pain or pressure in the abdomen and symptoms can worsen over time.

Do you suffer from **HEAVY MENSTRUAL BLEEDING?**

If you answer **"Yes"** to these questions, Sonata may be the right choice for you!

- ✓ Do your periods last longer than 7 days?
- ✓ Do you change your pad or tampon every 2-3 hours?
- ✓ Do you wake up throughout the night to avoid staining your bedding?
- ✓ Do your heavy periods interfere with your daily activities or work?
- ✓ Has your doctor talked to you about fibroids?

Consult with your doctor to compare your options and determine your treatment plan.

Women deserve an
INCISION-FREE option

How does the **SONATA TREATMENT** work?

This outpatient procedure usually takes less than one hour.

- The doctor passes the Sonata Treatment handpiece through the vagina and into the uterus.
- Ultrasound waves from the tip are used to locate the fibroid.
- The Sonata Treatment handpiece delivers radiofrequency energy to shrink the fibroid over time and reduce symptoms.

CLINICALLY PROVEN to be safe & effective

What patients are saying about the **SONATA TREATMENT**
